Right to work in the UK: Settled Status (no sponsorship required) | **Availability:** immediate

Professional Summary

AI Engineer and full-stack developer with 15+ years of experience building and operating production software. Recent focus: LLM-powered products, including multi-model orchestration (Gemini, OpenAI, DeepSeek), real-time streaming, document understanding and retrieval-augmented generation, delivered end to end from architecture to cloud deployment. AWS Certified Generative AI Developer – Professional and AWS Certified DevOps Engineer – Professional. Earlier career in enterprise and front-end development (SAP Fiori, Java, JavaScript) in the UK and Spain.

Core Skills

AI / LLM: LLM orchestration (Gemini, OpenAI, DeepSeek), RAG, hybrid search, embeddings, pgvector, self-hosted models (Ollama, Qwen), response streaming, evaluation

Backend: Python, FastAPI, Celery, Redis, WebSockets, REST APIs, PostgreSQL, MongoDB, Supabase, Java, Node.js

Cloud & DevOps: AWS, Oracle Cloud (OCI), Docker, Linux, Git

Front-end & mobile: React Native (Expo), JavaScript, TypeScript, SAP Fiori / UI5, HTML, CSS

Programming: Python, Java, JavaScript, TypeScript, C++, PHP, SQL

Professional Experience

(03/2025 - 09/2026) **Full Stack Developer (AI Engineering) – Zinga Education S.L.**

AI-powered learning platform for web, iOS and Android: document understanding, quiz generation and real-time tutoring with multiple LLMs.

- **Multi-LLM orchestration:** Designed a unified AI layer over three LLM providers (Gemini, OpenAI and DeepSeek) for document understanding, quiz generation and real-time math tutoring, with request throttling and error handling to keep availability high and token spend under control.
- **Asynchronous backend:** Built the backend with FastAPI, Celery and Redis so long-running tasks (text extraction, LLM calls) run off the request path, with retries, timeouts and exponential backoff.
- **Real-time streaming:** Streamed LLM responses to iOS, Android and web over native WebSockets, with message recovery (Redis Pub/Sub) and automatic reconnection, so users do not lose an answer when the connection drops.
- **Document pipeline:** Processed user-uploaded documents from cloud object storage with concurrent workers and idempotent operations that prevent duplicated work.
- **Cross-platform delivery:** Shipped a single Expo (React Native) codebase for three platforms (web, iOS and Android), with authentication and credit-pack payments through two channels (Stripe on web, native in-app purchases on mobile).
- **End-to-end ownership:** Architecture, implementation, deployment and operation on Oracle Cloud (Load Balancer, Object Storage).

Technologies: Gemini, OpenAI, DeepSeek, FastAPI, Celery, Redis, WebSockets, MongoDB, Supabase, OCI (Load Balancer, Object Storage), React Native (Expo), Stripe, in-app purchases.

(04/2016 - 08/2024) **Front End Developer – Capita PLC (UK)**

- Migrated a Web Dynpro Java application from legacy systems to SAP Fiori applications.
- Built new user interfaces following SAP Fiori design guidelines (list reports, object pages, flexible-column layouts) and defined OData models with one-way and two-way binding.
- Deployed Fiori applications from SAP Web IDE / BAS to SAP Launchpad.
- Identified the root cause (a misconfiguration during a systems migration) of a failure affecting thousands of German users, and resolved it.
- Improved the user experience of legacy systems by fixing bugs and optimising legacy code.

Technologies: UI5, OData v2, CDS views, S/4HANA, Java, JSP, jQuery, TypeScript, XML, HTML, CSS, Dojo, Git.

(11/2015 - 03/2016) **Full Stack Developer (Contractor) – ParkwayLogic (UK)**

Front-end and back-end development of a trading system. AngularJS, jQuery, Ajax, Bootstrap, PHP, MySQL, Linux, AWS.

(04/2015 - 06/2015) **Front End Developer – SuperAwesome (UK)**
Responsive web pages for advertising companies. JavaScript, jQuery, Ajax, JSON, HTML, CSS, Bootstrap, Git.

(03/2014 - 01/2015) **Front End Developer – Lytespark (UK)**
Video conferencing services built on WebRTC: Chrome extension for screen sharing, REST API support and cross-browser compatibility (Chrome, Firefox, Opera, Safari, IE). JavaScript, Node.js, MongoDB, REST, Git.

(10/2013 - 01/2014) **Analyst – Alten (Spain)**
Gas Natural project: coordinated functional and development teams on a web application migration; requirements validation and SQL data checks. Java, SQL, Redmine, SharePoint, Subversion.

(10/2010 - 08/2012) **Analyst / Back-end Developer – Everis (Spain)**
AXA (car insurance): interface analysis and testing software for a new policy management system. MAUI-Telefónica: functional design and validation of a new standardised portal. Java EE, Python, UML, SQL, Jira.

(10/2007 - 07/2010) **Analyst / Developer – Dynasty Technology Group (Spain)**
Banking device software (pinpads, ATMs, check readers, printers) following the JXFS standard on Linux and Windows. Java, C++, JUnit, JNI, Linux.

Projects

AI Engineering Lab – self-hosted RAG system lair60.github.io/lab

- Retrieval-augmented question answering over documents: hybrid retrieval (pgvector + PostgreSQL full-text search), multilingual embeddings and Qwen models served with Ollama on Oracle ARM CPUs, with streaming answers and a technical mode that exposes chunks, scores and prompts.
- Production concerns: asynchronous ingestion (FastAPI, Celery, Redis), per-session data isolation with automatic deletion, rate limiting, quotas, Cloudflare Turnstile bot protection and a kill switch.
- Evaluation: tuned chunking, retrieval and model choice against a 23-question evaluation set (95% retrieval hit rate; 0 of 4 unanswerable questions answered with invented information).

Education

Master's degree in Information Technology – Complutense University of Madrid, Spain | 10/2008 - 09/2013

Certifications

AWS Certified Generative AI Developer – Professional (10/2026) Credly
AWS Certified DevOps Engineer – Professional (07/2020) Credly
SAP Certified Development Associate – SAP Fiori Application Developer (03/2018) Credly

Languages

English (Professional) | Spanish (Native)
